

## Monitoring and Targeting

**PINPOINTING WHEN, WHERE AND HOW ENERGY IS USED IN YOUR ORGANISATION IS KEY TO USING IT EFFICIENTLY AND IDENTIFYING WHERE REDUCTIONS CAN BE MADE.**

EIC has leading software and the necessary expertise to help you decipher your energy data and make recommendations for cost savings.

### How EIC can help

Our software allows users to fully report, compare and quantify energy metering data for each monitoring point, activity area or entire site.

The software provides a variety of reports for use including:

- Profile graphing.
- In/out of hours consumption charts.
- Cost reports.
- Dynamic profiling.
- Degree days.
- CUSUM reports.

The software also allows for alerting functionality,

enabling users to set parameters for alerts to be raised if energy profiles breach desired levels.

There are a number of reports available for the user.

These are:

- Overview.
- Profiles.
- Tariffs.
- Business Hours.
- Activity Groups.
- Degree Day Report.

### Overview Report

The Overview Report illustrated bottom left provides a summary of some of the key energy reports; a useful feature providing users with an overall picture of the metering data under review.

### Profile Report

The Profile Report below centre shows metering for each selected meter. This can be a single meter profile or a number of meters each represented by different colours on the same chart. All meters can be overlaid on a single chart or split into individual charts.

### Data Range Comparison Report

The report shown below right provides the facility for data across multiple date ranges, to be compared. If a number of meters are selected, they will be grouped as one.

## Our team can:

- Help you to understand your consumption patterns.
- Uncover savings of up to 20% on average, helping you to reduce waste and maximise efficiency.
- Help to analyse all aspects of your data where you might not have realised the potential.
- Analyse your data for you so you can concentrate on running your business.
- Provide updates to our software so you can be sure you have the latest technology.

Further parameters can also be chosen based on date, period and grouping options. All the data can be viewed in our App - a responsive energy dashboard enabling business to view, compare and share data with building occupants. The App makes energy management understandable for everyone.

Using easy-to-digest dynamic animated charts and gauges, SMART.DASH quickly quantifies and visualises a building or an entire estates' energy consumption and performance.

### Why choose EIC?

EIC can provide the technology and the necessary support to help you interpret your energy data.

Our team can:

- ▶ Help you to understand your consumption patterns.
- ▶ Uncover savings of up to 20% on average, helping you to reduce waste and maximise efficiency.
- ▶ Help to analyse all aspects of your data where you might not have realised the potential.
- ▶ Analyse your data for you so you can concentrate on running your business.
- ▶ Provide updates to our software so you can be sure you have the latest technology.

### We're highly recommended

*"Oundle School believes that protection of the environment is an integral part of good institutional and educational practice. We are committed to minimising our impact on and improving the quality of the environment, both now and in the future and seek to engage all members of the school community to develop an ecologically sound approach to their work and activities so as to help us achieve our aims."*

Richard Tremellen - Estates Bursar  
Oundle School
